                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9/12/06 5:46 PM
                                                                                                                                                                                                                                                     I am working with Divya on ConnectU stuff. I just had a small problem. What I'm
                                                                                                                                                                                                                                                                    working on now is getting emails of thefacebook.com. My problem is that I can't
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    new InputStreamReader(connection.getInputStream());
                                                                                                                                                                                                                                                                                   navigate to the pages that I want through java since there is a login page. I dont really know how the session works. Do you know how to login to a ptp page keep your session info and then navigate to another page using the URL and HTTPURIConnection clients. I tried this to no avail:
                                                                                                                                                                                                                                                                                                                                                                                                       HttpURIConnection connection = (HttpURIConnection)
                                                                                                                                                                                                                  Sorry if you got a similar message. I dont know if my others went through.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   URLEncoder.encode("drm25@cornell.edg", 'UTF-8");
String pass = "pass="+URLEncoder.encode("*****",
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    If you have any suggestions it would be super belpful. Thanks again.
                                                                                                                                                                                                                                                                                                                                                                    URL url = new URL("bttp://www.thefacebook.com/login.php");
